

### **Case study** • Company which produce tractors:

- Custom production
- Basic configurations
- Production on a warehouse

# **Company description**

- Company which produce tractors:
- Custom production

Ce

- Basic configurations
- Production on a warehouse

- 1. When buying complex machinery, there is a concept of "configuration".
  - When ordering, you can specify the parameters of the tractor.
  - These parameters will affect the cost of the product and the production process.
- 2. Order production of a tractor under the client.
  - The customer's order for a tractor with certain characteristics.
  - Sales officer asks what parameters should be in the tractor and starts this option configuration in the system. Makes out the order of the client.
  - On the basis of this order, a production order is created and a tractor is produced for the customer.
- 3. Production to the warehouse.
  - Release of basic, running machines in advance to the warehouse according to the production plan. After receipt of the customer's order, this basic running machine is equipped to the specific customer and his wishes.

Sales planning settings by product category	Scenario: Rostselmash 🖉
Calculation by sales speed	Description: Stock
If the check box in sales plan by categories is selected, you can specify sales ranking and speed of product sale.	○ Demand planning ○ Supply planning ● Balance planning
The plan will be allocated to products considering ranking and speed of sales.	Balance planning
Production planning settings	
Calculation of demand for materials, work center kinds, and human resources	
Demand for materials: Optimistic •	
Main materials are planned regardless of use probability, alternative materials are not planned.	
Calendar: Business calendar 🔹 🗗	
It is not recommended that you change settings after entering plans.
